

Riverside Viaduct

New York, NY

Owner	Project	Painting Contractor	Date of Project
New York City Department of Transportation	Riverside Viaduct Structural Elements	Tower Painting	Spring 1997

This bridge was the first project for which the New York City Department of Transportation specified moisture-cured urethanes. With limited surface preparation and a desire to keep their roads open, they looked to Wasser to provide the coatings for nearly 800,000 sq.ft. of steel. The DOT was pleased with the results and our relationship with them has grown ever since.
